

STATIX

The premier platform for trading shares of professional athletes, backed by performance data.

STATIX

The Engagement Gap in Sports

The problem

There is no long-term way to make money on sports knowledge. Fans are forced into one-time, negative-sum sportsbooks, or a fantasy group where they can only bet against friends.

The modern fan wants more than a one-off bet; they want to **invest** in the athletes they believe in, tracking their careers and season as long-term assets.

Current options

Sports Betting

House edge ~5%. The average bettor is bound to lose long-term.

Fantasy Sports

A 30-year-old format. Hours of work for a small prize pool just between friends

Cards & NFTs

Illiquid speculation and very gamified, doesn't have a stock market feel of instant gratification.

STATIX

The Solution

+28.8% | Shai Gilgeous-Alexander $19.19 +28.0% | Stephon Castle $11.96 +19.6% | Joel Embiid $14.10 +12.8% | Luka Doncic

Athletes As Tradable Assets

What if there was an always-liquid marketplace that allows you to buy “shares” of a player? Having your portfolio grow as the players you invest in have exceptional performances.

Market Prices Performance!

We have formulated a fee redistribution system system that incentivizes users to price-in athlete athlete performance themselves. Meaning that we that we as the protocol do not have any influence influence on prices.

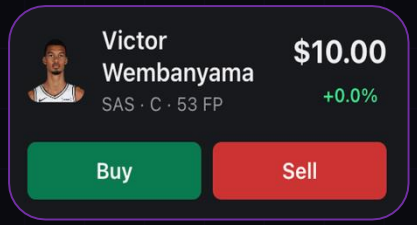

Everything is executed on blockchain with all all transaction being public promoting a transparent marketplace.

STATIX

How it Works on the User Side

1. Pick your favorite players

From a list of all the athletes in the league

2. Build a Portfolio

You can put all your money in one player or spread it around

3. Watch It Move

Each athlete's price updates continuously as other users buy and sell

4. Get Paid

$\frac{2}{3}$ of Transaction fees collected then get redistributed to those who hold the top players each week based on our fantasy formula.

$\frac{1}{3}$ goes to Statix as revenue

BASE POOL

20%

Split among **all shareholders**, proportional to total shares held across all players. Hold anything, earn something.

TOP PERFORMER POOL

80%

Reserved for holders of the **top fantasy scorers**, weighted by both their points and your share count.

STATIX

A New Market Opportunity

Statix sits at the unique convergence of Fantasy Sports, Betting, Prediction Markets, and Web3 infrastructure.

$185B volume in North America 2025

STATIX

Market Sizing

A $900B+ convergence

- **TAM** — Global sports betting handle (~$610B) plus prediction markets' annualized run rate (~$288B).
- **SAM** — NA basketball betting handle: 28% of $185B total NA sports betting handle.
- **SOM** — 3% of the $42B SAM, targeted over 5 years.

$900B+ TAM
Global betting + prediction markets

$52B SAM
N. America Basketball betting

$1.56B SOM
3% of $52B SAM, 5-yr target

TAM source: ~$610B global betting (2024); ~$288B prediction markets (Pew/The Block, mid-2026)
SAM source: AGA 2024 (28% of $150B total handle is basketball)
SOM source: own assumption — needs a comp to back it later

STATIX

Capitalizing on this Convergence

MARKET TRAJECTORY

Prediction Market Surge

Platforms like Kalshi have normalized “% chance of outcomes” as a form of information discovery and market sentiment on various topics.

OUR LONG-TERM VIEW

Prices as Performance Indicators

We envision Statix to be the place where player performance gets priced. Relative player prices and price history become a shared reference point for commentators and fans gauging market sentiment in real-time.

Sportsbooks have lost user trust through high margins. Statix is built on-chain making transparency our core advantage rather than a source of mistrust.

STATIX

Competitive Landscape

DIRECT COMPETITORS

Sorare

NFT-based fantasy. Not a liquid marketplace.

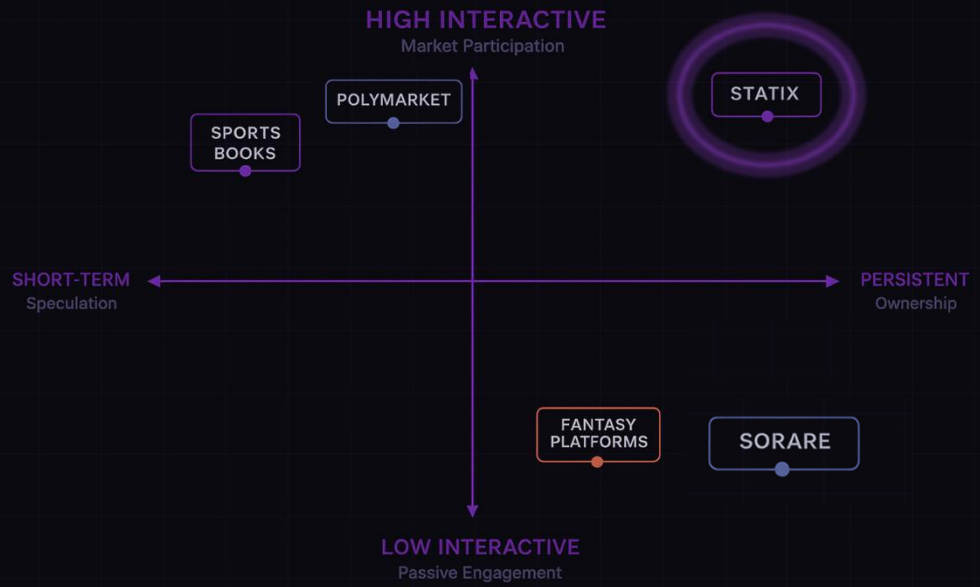

INDIRECT COMPETITORS

Sportsbooks (DraftKings/FanDuel)

Transactional betting; high churn and binary outcomes. No ownership.

Prediction Markets (Polymarket)

Event-based trading; lacks deep sports integration and not fully focused on the long-term aspect

STATIX

How do We Know This Works?

A private demo with 50 of our friends for the first round of the 2026 NBA playoffs

$500 in play money deposited to everyone’s account over 3 weeks
Top 3 users were rewarded real world prizes to keep the market realistic

Here's what it showed →

STATIX

Proof of Concept

Live on-chain market

$37,835 volume settled on Base (an Ethereum L2 blockchain)

Prices tracked reality

Share prices correlated **r = 0.63** with real fantasy output — discovery, not noise.

Dividend distribution

Dividends successfully claimed by users

Example: Statix share price for Nikola Jokic during the series against Timberwolves

On April 30th his team is knocked out, and users start selling their shares as he would not be eligible for dividends in the next round

De-risks the thesis: price discovery, fee economics, and the dividend loop all proven with real on-chain money.

The Dream Team

Sam Salehi

Physics + Computer Science @ UBC

Bioinformatics machine learning research

Sam Sayari

Business @ Ivey

Background in M&A and Real Estate

Kamyar Modabber

Computer-Science @ Western

Neuroscientific technology

Market formulation

Sayari's expertise in financial markets, combined with Salehi's quantitative background, allowed us to research, simulate, and develop original models for how this market should operate.

Industry Insights

League relationships, regulatory familiarity, and strategic guidance, which we aim to gain through the right investors.

Market Understanding

We and our university communities represent a core segment of our target market. As lifelong athletes and sports fans, we have an intuitive read on market sentiment.

Execution

The same strengths in finance and quantitative modeling, paired with Kamyar's background in blockchain, give us the technical foundation to build and deliver.

STATIX

Challenges & Strategic Moats

THE HURDLES

Regulatory Complexity

Navigating the intersection of securities law, gambling regulations, and digital asset frameworks across multiple jurisdictions.

Data & IP Licensing

Securing long-term rights from major leagues (NBA, FIFA, NHL, etc.) to ensure platform legitimacy.

We believe having investors with experience in these spaces will be our biggest help in overcoming these difficult challenges, and
see resolving them as the biggest first step.

OUR STRATEGIC MOATS

Market Mechanics

Since prices move only based on user activity, our network effect issue is making sure we have enough users that trade, for prices to reflect player performance. However, our simulations show that even just **300!!** Daily Active Users would be enough for prices to move this way

With the go-to-market strategy outlined on the next slide, we aim to establish ourselves as THE athlete stock exchange. This is a market where consumers gravitate to whoever is first and best-known. By launching the moment we have regulatory clearance, we secure a months-long head start on any competitor looking to follow.

STATIX

Strategy: Go Big Early

PILLAR 01

First-to-Market Positioning

Capture the early adopter market and build a responsive trading ecosystem. Vital to do before potential competitors get passed the regulatory hurdles.

This would be done through small and large social media content creators, streamers, and other traditional advertising methods.

PILLAR 02

Plug-in Ecosystem

Integrating Statix as a liquidity layer for existing prediction markets and sportsbooks.

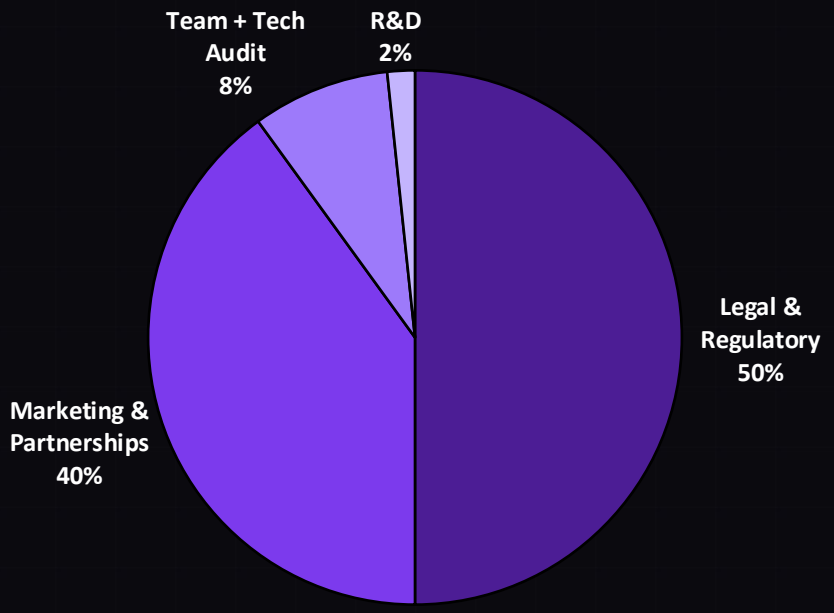

Instead of having competitors create their own version of an athlete stocks, we use a fee sharing system to host our market on their platform

PILLAR 03

Partnerships

Securing official data and IP rights with major professional sports leagues to legitimize the platform

Our Ask

TOTAL PRE-SEED ASK

$3,000,000

Allocation	Amount	Purpose
Legal & Regulatory	$1.50M	Licensing, compliance, securities counsel.
Team + Tech Audit	$250K	Hire engineers; full audit of tech stack pre-launch
R&D — Formula & Flow	$50K	Refine pricing formula and product flow.
Marketing & Partnerships	$1.20M	Go-to-market, league/sportsbook partnerships, user acquisition
Total	**$3.00M**
