Fantasy Players (US)

THE PROBLEM

Fantasy Sports is Broken

X Season-Long Commitment

Draft once, stuck all season. Injured player? Too bad.

X Zero Financial Upside

Pay entry fees, maybe win a trophy. No real returns.

X All-or-Nothing

Finish 2nd in a 12-team league? You get nothing.

X No Liquidity

Can't exit your position. Can't trade freely.

THE SOLUTION

A Stock Market for Athletes

Trade players like stocks. Earn dividends based on performance.

+ Liquid Market

Buy and sell player shares anytime via our AMM

+ Weekly Dividends

Earn real returns when your players outperform

+ Performance-Based

Better picks = higher dividends. Skill is rewarded.

+ Web3 Native

On-chain transparency. Your assets, your control.

HOW IT WORKS

Three Simple Steps

1

Buy Player Shares

Trade via AMM.
Prices move with demand.

2

Players Perform

Weekly fantasy points
vs projections.

3

Earn Dividends

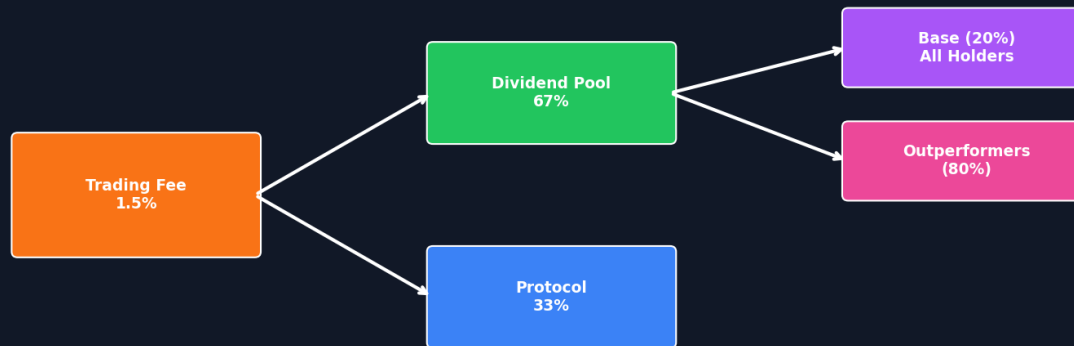

Outperformers share
the weekly fee pool.

The AMM (Automated Market Maker)

Each player has a liquidity pool using the constant product formula ($x * y = k$). When you buy shares, the price increases. When you sell, it decreases. This creates a self-balancing market where popular players naturally become more expensive, and undervalued players present buying opportunities.

THE MATH

Dividend Distribution

Outperformance Formula:

$$\frac{(\text{actual} - \text{projected})}{\text{projected}}$$

Players who beat their projection share the outperformer pool proportionally.

Example: \$1,000 Weekly Fees

Fee Split: \$670 to dividends, \$330 to protocol

Dividend Split: \$134 base (all holders), \$536 to outperformers

Player A: +30% outperformance -> Gets 66.7% of \$536 = \$357

Player B: +15% outperformance -> Gets 33.3% of \$536 = \$179

Player C: -10% (underperformed) -> Gets \$0

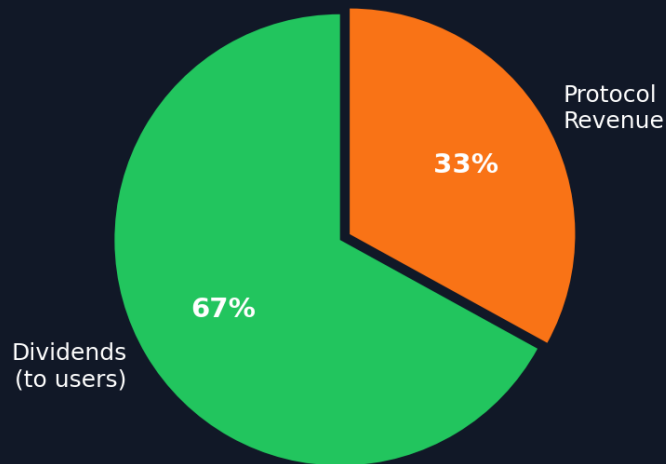

If you own 10% of Player A shares, you receive:

Base dividend: ~\$13 + Outperformer: \$35.70 = \$48.70 total

BUSINESS MODEL

Revenue From Every Trade

Fee Distribution (1.5% per trade)

Unit Economics

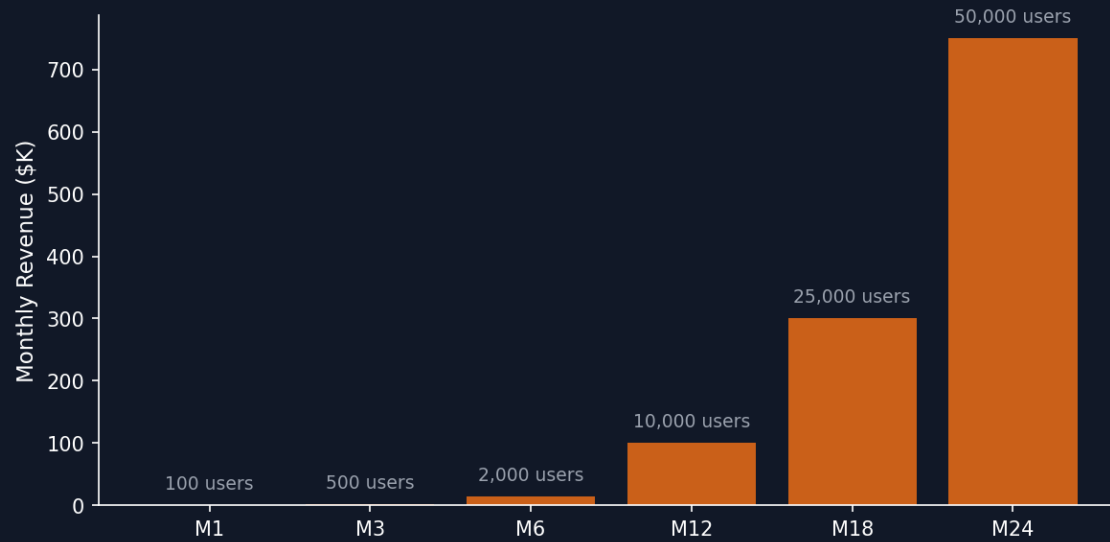

Trading Fee	1.5%
Protocol Take	0.5% (33% of fee)
Avg Trade Size	\$25
Revenue/Trade	\$0.125
Trades/User/Week	~10
Revenue/User/Week	\$1.25
LTV (6 months)	\$32.50

Key Insight: Volume is Everything

Higher trading volume = more fees = higher dividends = more users = more volume. This creates a powerful flywheel effect. Early users are rewarded with higher yields, incentivizing growth and retention.

PROJECTIONS

Revenue Growth

Assumptions

- \$50 avg deposit
- 30x annual turnover
- 0.5% protocol fee
- 15% monthly growth

TIMING

Why Now?

Sports Betting Legalization

38 states now legal. \$93B market growing 10%+ annually. Users are comfortable betting on sports.

Web3 Infrastructure Matured

L2s like Base offer <\$0.01 transactions. Wallet UX is finally good. Mainstream ready.

Fantasy Fatigue

Season-long formats are dying. Daily fantasy peaked. Users want something new.

Proven Models Exist

Polymarket proved prediction markets work. DeFi proved AMMs work. We combine both.

Dividend Fantasy

The Future of Fantasy Sports

- + Trade NBA players like stocks via AMM
- + Earn weekly dividends based on real performance
- + 1.5% fee per trade, 33% protocol revenue
- + Built on Base (Coinbase L2)
- + MVP complete. Ready to launch.
